Pray tell, dear Jim: what is the difference between Bob's posting of

the frequencies of department store dicks and Radio Shack's selling  
the frequencies of all the police frequencies in the USA?

Aw come on Jim. Lighten up. I hardly think that Bob's posting of  
publicly available frequencies is going to have any effect on shoplifting.  
How many shoplifters do you think have access to this net, have a scanner,  
and would take the time to monitor during the crime? And how many of those  
do you think could not simply buy the frequency book?

Bob,

I want you to know that some of us really appreciate your work in  
cataloging frequencies. I tend not to save the posting but I do know  
where to come if I need assistance. Thanks.

John

Where do you get your info about agreements with Russians? Who said anything about SAC? Who said anything about who could listen? My problem is not with the listening, but why the curiosity? I don't believe any individual is so great that all others MUST satisfy his curiosity. Just because you have a receiver doesn't grant you rights to know everything about what you hear on it.

Subject: ? Info on aux power source wanted

I'm looking for a source for a 120 (120/240?) VAC generator that can be powered from a utility engine (I've already got the engines, so I'm not looking for an integrated engine/generator unit.) I assume the emergency-service and field-day operators know about this, and would appreciate info. Email is fine. (Comments on regulators and frequency governors appreciated, too.)

Thanks, Gary (preparing for the next big quake...)

Right on. Was he trying to say that I don't have the right to listen  
to E&M radiation that somebody has SENT RIGHT THROUGH MY LIVING ROOM?!

I have the right to detect and demodulate any frequency I choose....  
Those that don't agree should perhaps close their eyes, for good. :-)

Interesting idea about taking down names from the shelters, problem is that  
Red Cross won't allow you to do that. Red Cross has a standing policy to  
not handle H&W for something like a 72 hour period after the event. This  
includes hams doing what was suggested by the newsletter. (I know, we asked ;-)

It would be interesting to go to Radio Shack in one of these malls, play with  
one of thier demo scanners, and tune in mall security. And leave it locked  
onto that frequency. :-)
